Education

University of Toronto, St. George — Toronto, ON
Bachelor of Science, Specialist in Statistical Science: Theory and Methods — *Expected May 2028*

- **Relevant Coursework:** Probability, Mathematical Statistics, Linear Algebra, Multivariable Calculus, Computer Science

Experience & Leadership

Finance & Internal Operations Director — Sep 2026 – Present
University of Toronto Machine Intelligence Student Team (UTMIST) — *Toronto, ON*

- Manage the operating budget, financial records, and University funding applications for one of U of T's largest AI/ML student organizations (8 departments, 150+ volunteers).
- Oversee internal operations, including procurement, reimbursements, and cross-department task tracking, to keep flagship initiatives such as an AI conference, hackathons, and 10+ ML project teams on schedule.

Associate — Sep 2026 – Present
DeerHacks Hackathon, UTM Mathematics & Computational Sciences Society (MCSS) — *Mississauga, ON*

- Support the organizing team for DeerHacks, UTM's largest annual hackathon (300+ hackers selected from 600+ applicants over 36 hours), assisting with event logistics, workshops, and sponsor coordination.

Asset Management Intern — Jun 2026 – Aug 2026
NBP Funds (NBP Fund Management Limited)

- Supported the investments team with equity research and portfolio analytics across 8 mutual-fund products managing $120M in AUM using Bloomberg Terminal and Excel.
- Built Python scripts that automated fund-performance reporting, cutting manual reporting time by ∼70% across 5 weekly reports.

Logistics Coordinator — Sep 2025 – Apr 2026
Computer Science Student Council, University of Toronto — *Toronto, ON*

- Coordinated end-to-end logistics for 12+ technical workshops and community events reaching 400+ students across two terms, delivering event plans and staffing schedules for each.
- Aligned timelines, approvals, and purchasing across 3 teams (Programming, Finance, Marketing), keeping 95% of events on schedule.

Projects

GridCast — ML Price Forecasting | *Python, LightGBM, scikit-learn, DuckDB* — Oct 2026 – Present

- Built an ML system that forecasts Ontario's 24 hourly day-ahead electricity prices every morning as calibrated distributions (LightGBM quantile regression, conformal prediction); live at gridcast.muhammadmemon.ca.
- Engineered a leakage-safe pipeline (pandas, Pandera, DuckDB) over 13,000+ market reports on Azure; beat LASSO, SARIMAX and naive baselines in backtests (∼26% lower CRPS; 90% intervals cover 89.8%).

Lectra — AI-Powered Lecture Companion | *Python, Gemini API, OCR* — 2nd Place, EmberHacks 2025

- Engineered a multimodal AI pipeline (transcription, OCR, Gemini) converting lecture audio and board images into accessibility-formatted notes with ∼92% transcription accuracy.
- Shipped an end-to-end prototype in 24 hours; placed 2nd of 30+ teams for solving a real accessibility gap.

Energy Efficiency in Machine Learning | *PyTorch, Quantization, Pruning* — 2025 – Present

- Benchmarked compute and energy trade-offs across 6 model architectures as a research contributor, identifying configurations that cut training energy by ∼30%.
- Profiled PyTorch training runs and applied quantization and pruning, reducing inference cost by ∼40% with under 2% accuracy loss.

Technical Skills

Languages: Python, R, C++, Java, JavaScript, SQL, HTML/CSS
Machine Learning & AI: PyTorch, scikit-learn, LightGBM, Transformers & LLMs, RAG, OCR pipelines
Statistics & Data Analysis: Regression, time-series forecasting, hypothesis testing, statsmodels, pandas, DuckDB
Tools & Cloud: Docker, AWS, Azure, Google Cloud, Git, Bloomberg Terminal
Interests: Chess, Badminton, Weightlifting, Video Games
